AGE/SEX: 77Yrs/Male

REF. BY:

INVESTIGATION: ULTRASOUND WHOLE ABDOMEN

Liver: is normal in size (~13.5cm), outline and showing normal parenchymal echogenicity. No focal lesion is seen. No intrahepatic biliary dilatation seen. Hepatic veins are normal. Portal vein is normal.

Gall bladder: Well distended. No e/o any calculus / mass seen in its lumen. No e/o any GB wall thickening or pericholecystic collection. Proximal CBD is normal in caliber.

Pancreas: is normal (head and body) in bulk and echogenicity, tail is obscured due to overlying bowel gases. MPD is not dilated.

Spleen: is normal in size (~8.8cm), outline and echogenicity. No focal lesion seen.

Right kidney: is small in size (~6.6 x 3cm), normal in shape and outline with increased cortical echogenicity. Corticomedullary differentiation is lost. No calculus or hydronephrosis is seen.

Left kidney: is normal in size (~9 x 4.8cm), shape and outline with **increased cortical echogenicity.** Corticomedullary differentiation is maintained. No calculus or hydronephrosis is seen.

Urinary Bladder: is partially distended.

Prostate: is normal in size (Vol~18cc), shape and echotexture.

A small anterior abdominal wall defect measuring~1.4cm size is seen at umbilical region.

Omental fat and small bowel loop is seen herniating.

No e/o any bowel wall thickening or sign of strangulation is seen in present scan.

Rest of the bowel loops are normal in calibre.

No lymphadenopathy / free fluid seen.

IMPRESSION:

- **Small right kidney with CMD lost. (Adv: RFT & Urine R/E).**
- **B/L increased renal parenchymal echogenicity S/O CKD.**
- **Small fat containing umbilical hernia.**

Please correlate clinically and with other relevant investigations.
