

NAME: PA04**DATED:****AGE/SEX: 41y /F****REF BY: CORPORATE****ECHO CARDIOGRAPHY REPORT**

MITRAL VALVE : Normal

TRICUSPID VALVE : Thin. Opening well. No Prolapse.

AORTIC VALVE: Tricuspid, normal, opens well.

PULMONARY VALVE: Normal. Normal 'EF' slope. Normal 'A' wave. No midsystolic notch.

M-MODE PARAMETERS

MEASUREMENTS			(NORMAL VALUES)
Aortic root diameter	24		(20-37mm)
Left Atrial diameter	26		(19-40mm)
Left Ventricular ED Dimension	49		(33-55mm)
Left Ventricular ES Dimension	27		(22-40mm)
Inter Vent. Septum thickness D	9		(06-11mm)
LV posterior wall thickness D	6		(06-11mm)
LEFT VENTRICLE FUNCTION INDICES			NORMAL VALUES
Ejection Fraction	60 %		(55-74%)
Fractional shortening	32.5%		(28-40%)

ON INTERROGATING WITH PULSE & CONTINUOUS WAVE DOPPLER IT WAS FOUND THAT THERE IS:-

No Aortic regurgitation.
No Pulmonary regurgitation present.
No gradient across LVOT
Mitral inflow. E > A
Aortic Velocity = 1.17 m/s
Pulmonary velocity = 0.8m/s

OTHERS

IAS/IVS intact
No evidence of any mass / vegetation
No effusion
No LA/LV clot

FINAL IMPRESSION: -

- **No RWMA**
- **EF- 62% normal LV function**
- **No MR/TR/AR.**
- **Normal RV function**
