

Medical Report - Patient Summary

Patient Name: John Doe

Age: 45

Gender: Male

Chief Complaint:

Patient reports persistent coughing and mild chest pain for the past week.

Clinical Observations:

- Vitals: BP 125/85 mmHg, Pulse 78 bpm, Temp 98.6°F
- No visible abnormalities on external examination.
- Breathing sounds slightly diminished in the lower right lobe.

Preliminary Diagnosis:

Possibility of early-stage pneumonia. Further imaging recommended.

Recommendations:

1. Chest X-ray to be performed immediately.
2. CBC and CRP tests to check for infection.
3. Start antibiotics only if imaging confirms infection.
