

NAME: PA05**DATED:****AGE/SEX: 28y /M****REF BY: CORPOTATE****ECHO CARDIOGRAPHY REPORT****MITRAL VALVE :****PML fixed, AML Doming****TRICUSPID VALVE :**

Thin. Opening well. No Prolapse.

AORTIC VALVE:**Thick** ,Tricuspid, normal, opens well.**PULMONARY VALVE:**

Normal. Normal 'EF' slope. Normal 'A' wave. No midsystolic notch.

M-MODE PARAMETERS

MEASUREMENTS			(NORMAL VALUES)
Aortic root diameter	26		(20-37mm)
Left Atrial diameter	28		(19-40mm)
Left Ventricular ED Dimension	44		(33-55mm)
Left Ventricular ES Dimension	28		(22-40mm)
Inter Vent. Septum thickness D	9		(06-11mm)
LV posterior wall thickness D	7		(06-11mm)
LEFT VENTRICLE FUNCTION INDICES			NORMAL VALUES
Ejection Fraction	60 %		(55-74%)
Fractional shortening	32.5%		(28-40%)

ON INTERROGATING WITH PULSE & CONTINUOUS WAVE DOPPLER IT WAS FOUND THAT THERE IS:-

Mild Aortic regurgitation.
No Pulmonary regurgitation present.
No gradient across LVOT
Mitral inflow.
Aortic Velocity = 1.97 m/s
Pulmonary velocity = .9m/s

OTHERS

IAS/IVS intact
No evidence of any mass / vegetation
No effusion
No LA/LV clot

FINAL IMPRESSION: -

- **RHD, Progressive MS MVA 2.6 cm²),**
- **Mild AR, Mild TR PASP=30mmHg**
- **EF- 60% normal LV function**
- **No PAH.**
- **Normal RV function**
