

**NAME: PA02**

**DATE: 21/05/2025**

**AGE/SEX: 45Yrs/Male**

**REF. BY:**

---

---

**INVESTIGATION: ULTRASOUND WHOLE ABDOMEN**

---

---

**Liver:** is mildly enlarged in size (~15.5cm), normal in outline and shows diffusely increased in parenchymal echogenicity and obscuring periportal echogenicity S/O Grade-II fatty liver. No focal lesion is seen. No intrahepatic biliary dilatation seen. Hepatic veins are normal. Portal vein is normal.

**Gall bladder:** Well distended. A large echogenic calculus measuring ~20mm size is seen in its neck region with posterior acoustic shadow with mild sludge. No e/o any GB wall thickening or pericholecystic collection. Proximal CBD is normal in caliber.

**Pancreas:** is normal (head and body) in bulk and echogenicity, tail is obscured due to overlying bowel gases. MPD is not dilated.

**Spleen:** is normal in size (~9cm), outline and echogenicity. No focal lesion seen.

**Right kidney:** is normal in size (~11cm), shape and outline with mildly increased cortical echogenicity. Corticomedullary differentiation is maintained. Two small echogenic calculi measuring ~4mm size is seen in lower calyx ~3mm size is seen in mid calyx.  
No hydronephrosis is seen.

**Left kidney:** is normal in size (~11.5cm), shape and outline with mildly increased cortical echogenicity. Corticomedullary differentiation is maintained. A small calculus measuring ~3mm size is seen in lower calyx. No hydronephrosis is seen.

**Urinary Bladder:** is well distended and shows normal wall thickness and anechoic lumen.

**Prostate:** is normal in size (Vol~18cc), shape and echotexture.  
No lymphadenopathy / free fluid seen.  
Bowel loops are normal in calibre.

**IMPRESSION:**

- Mild hepatomegaly with Grade II fatty liver.  
(Adv: CBC, LFT, Lipid Profile & Viral Markers).
- Cholelithiasis with mild sludge.
- B/L mildly increased renal cortical echogenicity. (Adv: RFT & Urine R/E).
- B/L small renal calculi.

Please correlate clinically and with other relevant investigations.
